Input: project3.scala numNodes numRquests

Output: the average number of hops that have to deliver a message

Example:

scalac Node.scala NodeId.scala boss.scala
Project3.scala 100000 5

```
<terminated> project3$ [Scala Application] D:\Java\bin\javaw.exe (2013年10月25日 下午3:39
Request 1
Request 2
Request 3
Request 4
Request 5
average hop is : 7.281166
```

The largest network I managed to deal with is 100000 nodes
